

## Crust Breaking Machine

### Catalog

---

### General Features :

---

After rainfall or irrigation, mud and clay particles concentrated by water on the soil combine to form a hard layer, generally 1-2 cm thick. This layer is called the cream layer. It is a soil cultivation tool made to break the slip layer, to aerate the soil and to prepare better conditions for the plants during development.

### Technical

---

Working width: 3 - 3,5 - 4 - 4,5 - 5 - 5,5 and 6 m folding models are available.
